ACHSE
PRECISION IN MOTION

PRODUCT CATALOGUE

Automotive Components

Cold Forming | CNC Turning | CNC Turning Job Work

Representative product images

WHAT WE DO

Achse delivers precision automotive components made two ways: **cold formed** for strength and repeatability at volume, and **CNC turned** for tight-tolerance, complex or low-volume parts. Formed parts can be finished on our in-house CNC machines, so one team is responsible for the drawing, the process and the inspection.

1 Cold Formed Components

Sleeves, bushes, shafts and gear forms formed to near-net shape.

2 CNC Turned Components

Shafts, bushes, flanges and fittings turned to your drawing.

3 CNC Turning Job Work

Send drawing and material; we turn, inspect and deliver.

Design support

Process and drawing review before any part is made.

In-house CNC

Turning and finishing on our own CNC machines.

Inspected lots

Dimensional and visual checks by Achse before dispatch.

Quality focus

Process discipline modelled on automotive quality practice.

COLD FORMING

Components Through Cold Forming

Sleeves, bushes and shaped tubes
Formed to near-net shape

Gear and pinion forms
Strong, repeatable forged geometry

Representative product images

TYPICAL COMPONENTS

Sleeves & bushes	Plain, flanged and shaped sleeves for shafts, linkages and housings.
Shafts & pins	Stepped shafts, pins and spindles formed close to final size.
Gear & pinion forms	Toothed and splined forms with continuous grain flow.
Caps & housings	Cup and cap shaped parts with controlled wall thickness.
Fitted parts	Formed bodies with threaded studs or machined features added.

Why cold forming

- Less material wasted than machining bar
- Grain flow adds strength
- Consistent dimensions across batches
- Smooth surface finish
- Lower cost per part at volume

Formed, then finished

Formed parts can be finished on our in-house CNC machines for threads, cross holes and tight diameters, with Achse inspection before dispatch.

Have a component suited to cold forming?

Send your drawing or sample with quantity to srihari@achse.in or call +91 9900013667.

CNC TURNING

Components Through CNC Turning

Turned bodies, rings and shafts
Steel, stainless and non-ferrous

Precision turned assortment
Flanges, bushes, nuts and stepped shafts

Representative product images

TYPICAL COMPONENTS

Shafts & stepped pins	Turned shafts with steps, grooves, threads and cross holes.
Bushes & sleeves	Plain and flanged bushes, spacers and sleeves.
Flanges & rings	Drilled flanges, collars and rings to your drawing.
Fittings & couplings	Threaded fittings, nuts and connectors.
Valve & hydraulic parts	Spools, plugs and bodies with grooves and ports.

Made to your drawing

- Carbon and alloy steels
- Stainless steel grades
- Brass and aluminium
- Threads, grooves, cross holes and bores
- Finishes and heat treatment as specified

Held to tolerance

Turned on our in-house CNC machines and checked against your drawing, with an inspection report on request.

Need a turned component to your drawing?

Send your drawing or sample with quantity to srihari@achse.in or call +91 9900013667.

JOB WORK

CNC Turning Job Work

Your drawing, our machines

Send the drawing and material. We turn, inspect and deliver.

- Prototypes to production batches
- Free-issue material or material arranged by Achse
- Drawing review before machining starts
- Inspection before dispatch
- Packing and delivery on the agreed schedule

HOW JOB WORK RUNS

1. **Enquire** — Drawing, material and quantity
2. **Review** — We check feasibility and tolerances
3. **Machine** — Turned on our CNC machines
4. **Inspect** — Checked against your drawing
5. **Deliver** — Packed and dispatched on time

Formed or turned, one team

Whether your part is cold formed, CNC turned or both, Achse handles the drawing review, machining and inspection as one job with one point of contact.

Send us your part drawing

We will respond with a drawing review and quotation.
